

Comprehensive medical and
psychological rehabilitation for
military and civilian patients at
the Aurum Medical Center

Since 2014, the problem of post-traumatic syndrome is one of the largest in Ukraine and abroad

40%
participants of the
war in the East
Ukraine has
experienced PTSD or
other disorders*

*According to unofficial data

Active participation in the comprehensive solution of this problem in teamwork with specialists, other rehabilitation centers, NGOs and foreign specialists are the main task of the center

General concept of post-traumatic care:

Traumatization

Trauma from the Greek TRAUMA is a violation of integrity.

Trauma is one of the key problems of human existence in modern society. Trauma stops people so much that they lose interest in the present future, in their souls they remain in the present past.

Due to the injury, a problem arises:

- Physical integrity
- Mental stability
- Psychophysical interaction in
- Body

Hospital care

- Save lives, stabilize the work of vital organ systems
- Physical integrity comes first
- Quality care and professional interaction of hospital staff are important

Rehabilitation

- Rehabilitate — Ability of Regeneration
- Support for physical functional activity.
- Stabilization of psychoemotional state.
- New value consciousness.
- Creation of a surrounding environment free from violence.

History of the beginning:

- From the first days of Russia's full-scale military aggression on the territory of Ukraine, we have been there for you
- Kyiv, Chernihiv, Bucha, Zaporizhzhia, Mykolaiv, Kherson, Kramatorsk
- Military & Civilian
- Medicines, medical instruments, food, clothes, warm clothes, hygiene products, equipment for the military
- We Feel Pain and Need
- We understand how to help

Goal of the project:

Comprehensive
rehabilitation assistance to
military and civilians who
suffered as a result of the
military aggression of the
russian federation in
Ukraine, using proven
modern European and own
author's rehabilitation
methods

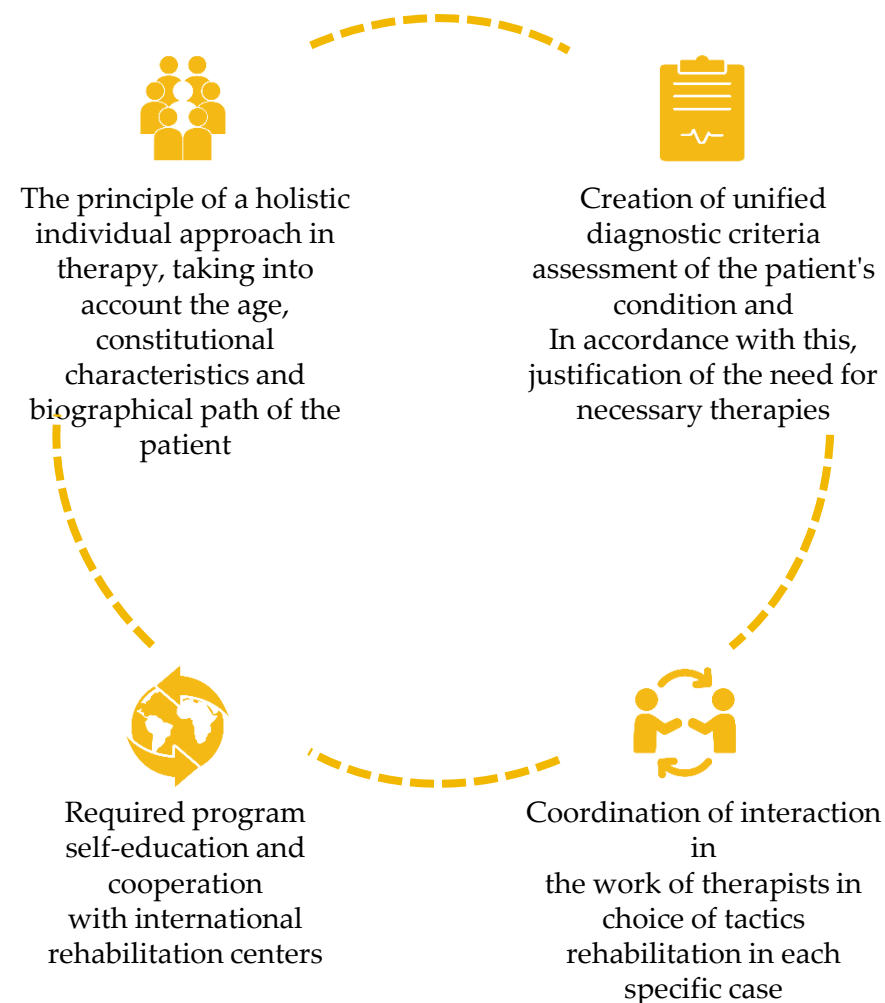

The concept of the therapeutic component of rehabilitation

In the conditions of war, the work of the center will be based on the use of methods, the effectiveness of which has been confirmed by international and national experience of their practical use

The emphasis in the work will be based on:

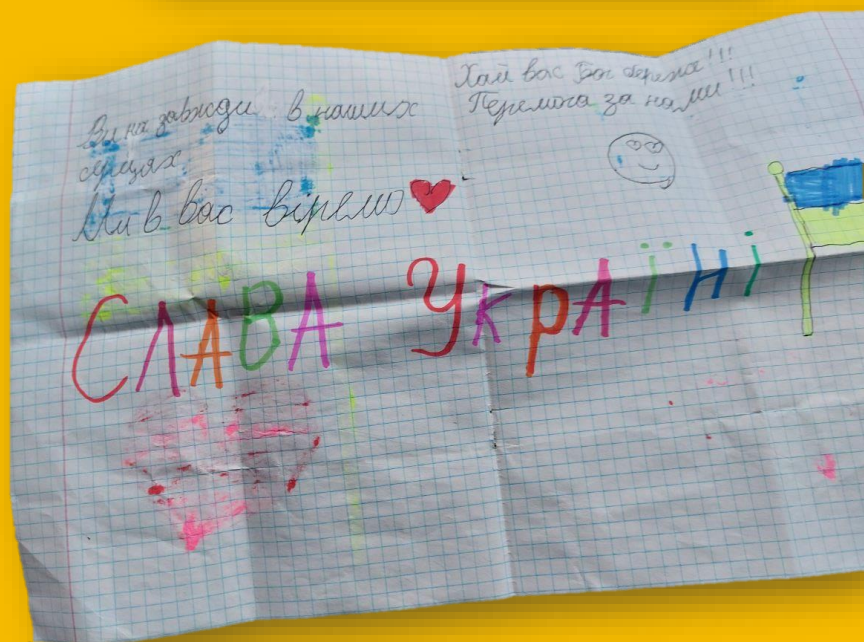

- the use of proven therapies
- introduction of new approaches based on the latest developments of specialists
- development of new types of therapy according to the results obtained in the process of rehabilitation at the center

Uniqueness of the center:

The center's activities are aimed at restoring not only the physical and psychological state, but also at reassessing the meaning of life and establishing a new value consciousness in the modern world.

Technical characteristics of the center:

- The center is located in the city of Kyiv at the address: st. Riznitskaya, 11. Room area: 125 m²
- Designed for simultaneous outpatient rehabilitation of up to 20 patients
- A team of rehabilitation specialists and doctors by specialization has been formed
- The center is equipped with equipment for rehabilitation procedures

Structure of the center:

Direction of medical rehabilitation:

- Physiotherapist's office
- Treatment room: oil-dispersion baths, rhythmic oil rubbing, therapeutic massage
- Psychotherapeutic room
- Art therapy room

Direction of social rehabilitation:

- Group Therapy Unit
- Department of Legal Aid and Employment

Specialization of the center:

- Post-traumatic stress disorder (PTSD) caused by the consequences of the military aggression of the Russian Federation in Ukraine with the following disorders:
 - Increased irritability
 - Unjustified outbursts of anger and aggression
 - Hysterical states
 - Feelings of emptiness, apathy, depression
 - Suicidal thoughts
 - Rejection of reality, feelings of detachment from loved ones, hopelessness about the future
 - Sleep disorders
- Neurocirculatory disorders
- Diseases of the spine and joints with pain syndrome
- Postoperative assistance in normalizing the function of the musculoskeletal system
- Functional disorders of the gastrointestinal tract

Scope of medical and rehabilitation services of the center:

- Conducting an initial, staged and final rehabilitation examination by a physiotherapist, psychotherapist and rehabilitation specialists – members of an interdisciplinary rehabilitation team
- Formation of a rehabilitation diagnosis, drawing up an individual rehabilitation therapy plan
- Providing psychological assistance
- Consultation of the patient by doctors of other specialties
- Referral of the patient to other healthcare facilities/units to provide him/her, if necessary, with specialized medical care

- Referral of the patient, if indicated, for laboratory and/or instrumental examinations in accordance with industry standards in the field of health care
- Organization of training of the patient/caregivers on the specifics of care, prevention of possible complications and compliance with recommendations at all stages of care
- Conducting group therapy in order to adapt patients to social life in a changed environment.

The concept of rehabilitation therapy of the center:

Combination of teleological and syncretic approaches in rehabilitation therapy based on the theory of solutogenesis

Treatment methods:

Individual work with a physiotherapist:

Recommendations for maintaining a daily regimen and dietary nutrition, drug therapy taking into account post-hospital therapeutic recommendations: pharmacological synthetic drugs, herbal medicine, homeopathy

01

Individual work with a psychologist, psychotherapist

02

Group therapy aimed at finding a meaningful, motivational orientation in life, social adaptation, and the formation of a new value consciousness

03

Therapeutic and rehabilitation procedures carried out by doctors and other specialists of the center:

- ✧ Pharmacupuncture
- ✧ Therapeutic massage, manual therapy of the spine
- ✧ Kinesiotherapy
- ✧ Post-isometric relaxation
- ✧ Osteopathy
- ✧ Oil-dispersion baths
- ✧ Rhythmic rubbing of therapeutic ointments, oils
- ✧ Apparatus pressotherapy
- ✧ Vacuum Massage
- ✧ Therapeutic Exercise
- ✧ Art therapy

Algorithm of patient rehabilitation:

Consultation with a physiotherapist

Consultation with a psychologist,
psychotherapist

Consultation of specialists of the center
- establishment of an individual
rehabilitation therapy plan and its
implementation in the center, taking
into account the needs and
characteristics of the patient's condition

Control-fixation (entering data into
the patient's rehabilitation card) of
the patient's condition in the
dynamics of therapy 1 time per
week to find out the prognosis and
effectiveness of the rehabilitation
assistance provided, if necessary,
correction of the rehabilitation
program

The basic rehabilitation period is 4-5 weeks (an approximate individual rehabilitation card of the patient is attached), in the future, depending on the patient's condition and needs, support is established and recommended individually.

Research activities of the center:

Based on the results of the rehabilitation measures, statistical reports are drawn up and analyzed for compliance of the actual results with expectations on the basis of subjective and objective data from examinations and questionnaires of patients.

In particular, before the start of rehabilitation and upon completion of the basic course (basic rehabilitation period), the patient fills out a questionnaire developed by the center's specialists, which allows to determine the psychophysical state of the patient and his own motivational factors of social activity.

The questionnaire will help to assess the effectiveness of the center's work and can be used in research activities in cooperation with both domestic and international scientific institutions and therapeutic institutes.

On this basis, it is planned to create a research unit of the center in order to develop general recommendations for the rehabilitation of patients using the center's methods.

Features of the center:

- Teamwork. Interaction of the center's specialists in the choice of therapy methods
- In therapy, the emphasis is on the therapist's direct contact with the patient's body ("manual work"). This helps the patient to feel trusted and supported through the warmth of the therapist's hands and improves the effect of the treatment procedures. This technique is especially important in cases where metal fragments remain in the patient's body after injuries, which limits the possibilities of using hardware therapy
- Drug therapy includes the full range of possibilities of modern medicine, namely: chemically synthesized medicines, herbal medicine, homeopathy + recommendations of diet and daily regimen
- Research activities are carried out in the medical, demographic and legal fields
- International cooperation with specialists from Germany, Austria, Czech Republic, Switzerland, Holland, Lithuania
- Partnership with business structures and cultural communities of Ukraine, Poland, Germany

Practical activities of the center:

➤ Patient's Name, Age	➤ Status, rank of serviceman, non-confidential	➤ Patient's complaints at the time of contacting the center	➤ The therapeutic procedures applied
Alekper, 60 years old	Volunteer of the territorial defense of Kyiv. Works as part of the air defense of Kyiv. Rank - soldier.
